

Cross-cut “Light Blend” Travertine MODERN

Light Blend travertine represents the perfect synthesis between the solidity of natural stone and a color palette oriented toward modernity. Extracted from beige-base quarries, this material stands out for a meticulous selection that prioritizes uniformity and aesthetic delicacy.

Aesthetic Characteristics

- **Coloring:** A bright and warm beige palette, capable of amplifying the natural light of any space.
- **Texture:** Characterized by light **tone-on-tone clouding**, Light Blend avoids sharp contrasts to offer a visually velvety and harmonious surface.
- **Cross-cut:** The “cross-cut” processing enhances the natural clouding of the stone, providing a soft and contemporary look, ideal for minimalist or organic interior design.

Versatility and Performance

Do not be fooled by its ethereal elegance: travertine is an extremely resilient stone. Thanks to its technical properties, Light Blend is the ideal solution to ensure continuity between indoor and outdoor spaces.

Suggested Applications:

- **Living Areas and Bathrooms:** For environments seeking timeless elegance and a welcoming atmosphere.
- **Outdoor & Pools:** Perfect for pool edges, terraces, and walkways, thanks to its resistance to atmospheric agents and its natural ability to not overheat excessively in the sun.

Dimensions

N/A

Format
